Splunk SIEM Security Monitoring Lab

Project Screenshots and Documentation

Figure 1: Windows Failed-Login Investigation

Description: Imported Windows Security Event ID 4625 logs into Splunk Cloud and investigated eight failed-login events. Identified seven time synchronization errors and one authentication failure.

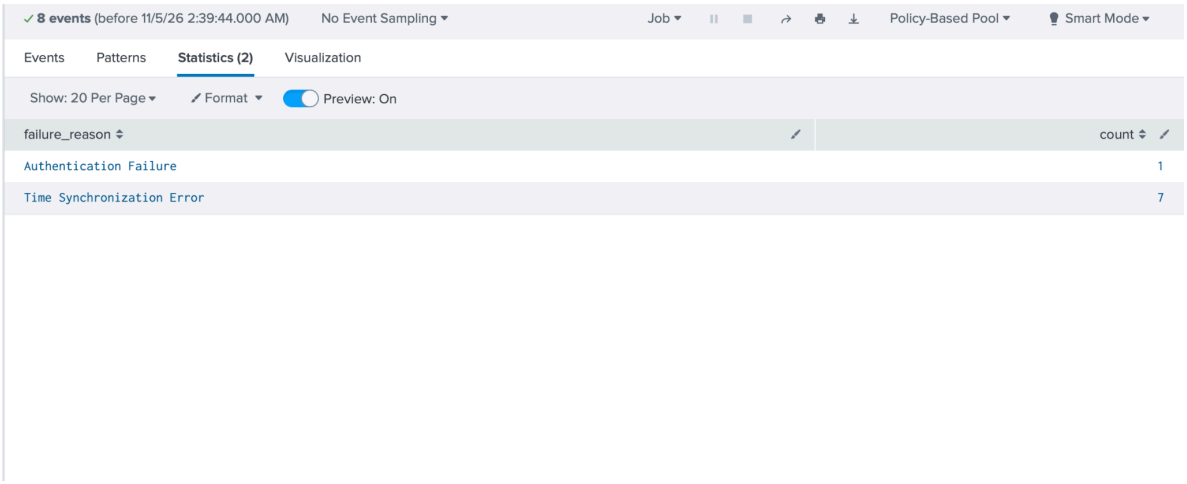

Figure 2: Windows Security Monitoring Dashboard

Description: Created a Splunk dashboard displaying failed-login activity over time and authentication failure reasons using column and pie charts.

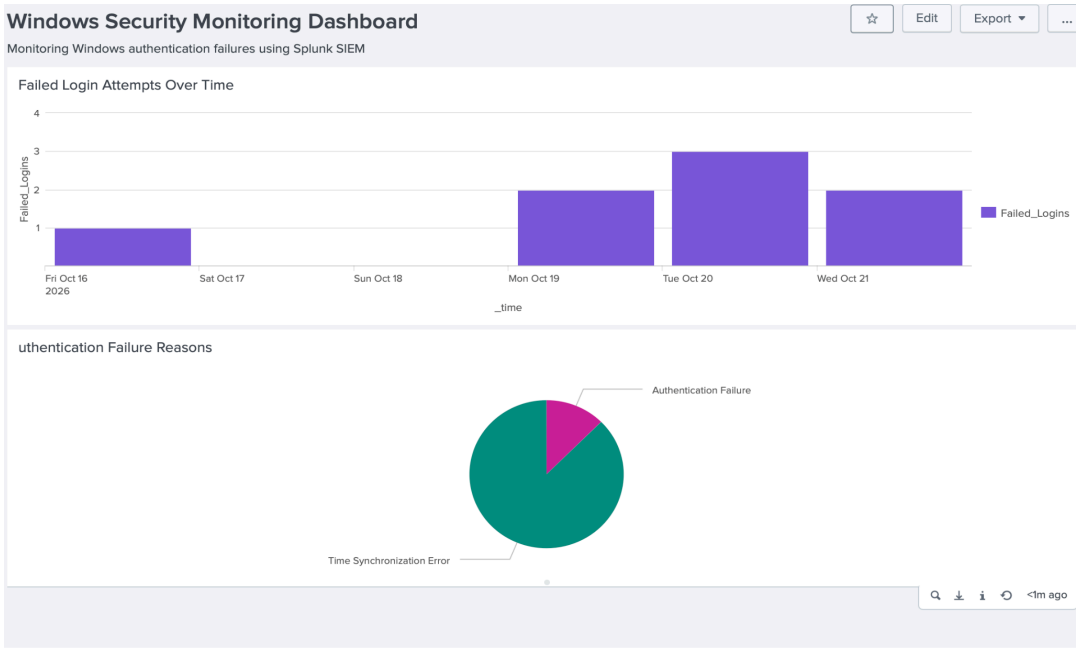

Figure 3: Windows Failed-Login Detection Alert

Description: Configured a scheduled Splunk alert to detect five or more failed-login events within 15 minutes. The alert is enabled but has not yet been tested with live log forwarding.
